

(Bottom of SM)

(Engine Bell)

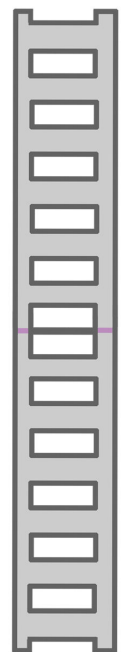

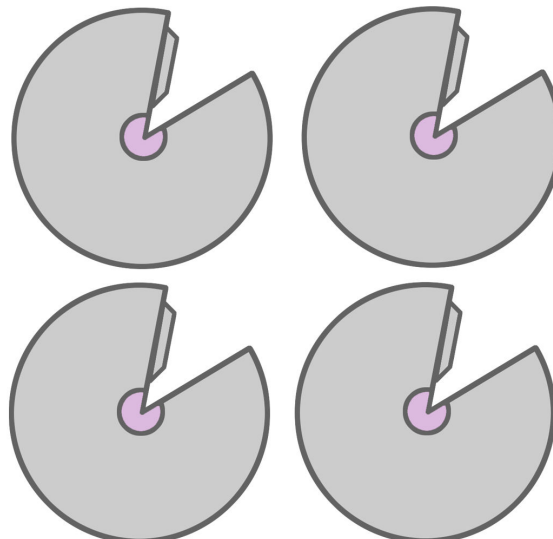

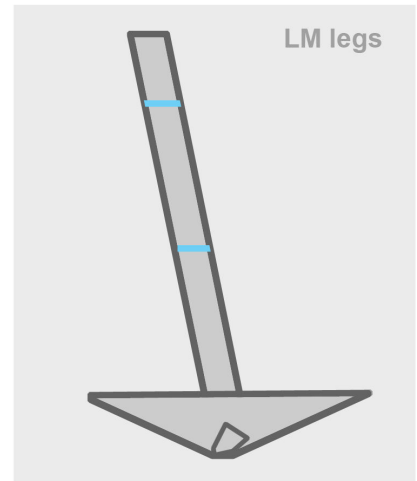

Shape the engine bell into a cone and secure with the tab.

Cut out the middle section of the bottom of the SM, and secure all of the tabs around the edges together. Place the engine bell through the hole, facing out. Attach the bottom to the SM. The front part may overlap where the blown panel is. That's okay. This section will probably be a pain. Sorry in advance.

Form tight cylinders out of the Lunar Module legs. Cut them along the purple lines. Form cones out of the LM's leg "feet" (grey side out) and secure with the tab. Cut out the purple section, slide the LM leg into the hole, and secure the leg's tabs underneath the feet.

Cut out the ladder for later. Be careful when cutting out the space between the steps.

(ladder)
