

(Lunar Module Bottom)

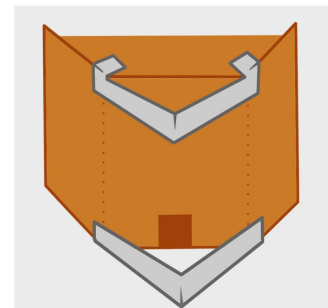

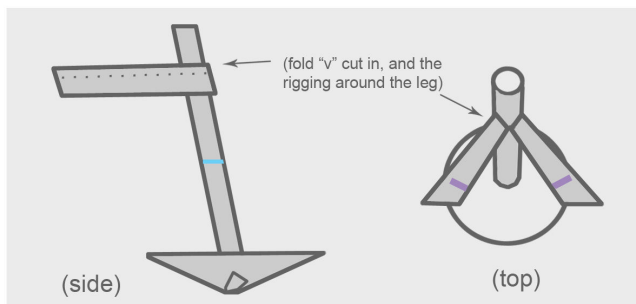

Cut out the box with an "x" through it.

Fold and secure the Lunar Module Bottom using the tabs.

- 1) Cut out and fold the top (a) and bottom (b) leg riggings. Cut along the solid purple and blue lines respectively.
- 2) Facing the top rigging up (purple lines up), attach the rigging to a LM leg at the top blue line. It will look like the following.

- 3) Do Step 3 for the bottom rigging, but make sure to put the blue lines facing towards the bottom of the rig. Both colors on the rig should not face each other, if this makes sense.
- 4) Repeat Steps 2 and 3 on all LM legs.
- 5) Place the ladder on the LM leg with the triangle on its side.
