

Fold over and slip up through the cut solid line from the base of the diorama. Face the text AWAY from the front of the diorama. The blank side should be towards the front of the diorama (facing the ship). Tape the dotted line sections under the base.

Roll these pieces of the mast as tight as possible, and glue or tape the end so that it doesn't unravel. I used a toothpick to help start the rolling process.

Sir Shackleton's Endurance (part 1)

A three-masted barquentine, Endurance was the ship used by Ernest Shackleton for his Imperial Trans-Antarctic voyage across Antarctica via the South Pole.

Starting in 1914, the ship sailed from Buenos Aires with a crew of 28 members and 69 Huskies to the little whaling town of Grytviken (South Georgia) for provisions for the main trip. Though it was forecasted that the Weddell Sea had severe ice and advice was to wait it out, Shackleton loaded up on supplies and left for his voyage. Endurance slowly made it to the Weddell Sea where it became completely stuck in a pack of ice. The ice pressure finally crushed the hull of the ship around October of 1915. In November of 1915, Endurance finally was taken by the ice – leaving its crew stranded on the Antarctic ice.
