

(front of molasses slide)

Now you should have a tank which has a molasses top on the inside, and molasses coming out of the top of the hole on the side of the tank. There should still be a big hole you can see through on that side of the tank. This section here will cover it up. Fold the dashed line up and bend the piece overall so it has a rounded shape. Place inside of the gap where the hole is (folded dashed line at the bottom), and secure to the inside of the tank. This should probably be angled a bit so that the bottom juts out more than the top.

Now with the tank completed, connect it to the base of the diorama. Insert the three tabs on the bottom of the tank to the slits on the base (pg1), and secure underneath the base. All the molasses should be facing the same direction (diagonally to the left).

Congratulations!

Another Disaster Diorama has been completed... hopefully with less frustration and screaming than the Apollo 13 project. Thanks again for checking out this papercraft and all of the others.

I love comments and feedback about the projects. If you have any, contact me at info@spitefuls.com

Please be sure to check out Spitefuls for other cool and snarky items. www.spitefuls.com
