

This “accordion” piece will fit inside of the backing and be used with the tab on the next page to make the rocks and lava of Mount Vesuvius come up and down out of the top of the volcano. There are two options for how this can work.

1: If using card stock for the project, you will only need one of the accordion pieces to fit inside of the backing. Discard the other identical piece.

2: If using regular paper, cut out both pieces, glue them together (color sides facing out) to stiffen the paper.

With either option, fold down the top section on the dotted line, then fold the bottom section back and forth on the dotted and dashed lines to make a zig-zag accordion pattern..
